Warranty: 1 Year Parts & Labour

Beat Your Competitors

And Stand Apart From The Crowd!

Tanfastique... Launch the new

Zenith High Pressure Tanning Bed....

it's more than just a machine.

Tanfastique's latest Tanning bed offers you both High Pressure and Low Pressure tanning with a difference the new Zenith is fitted with 20 x 160watt tanning lamps in the base and 14 High Pressure Tanning Lamp in the Canopy.

Clients demand a faster and more-efficient method of tanning. Compared to low-pressure lamps, high-pressure lamps emit a higher level of ultraviolet light in the UVA range giving a stronger, more immediate tanning result. Conventional Sunbeds expose the skin to much higher levels of UVB, and in doing so only tan the outer layer of the skin, this in turn causes the skin to exfoliate at an accelerated pace, (5-10 days).

Because High Pressure beds tan predominately with UVA rays, our body is allowed to return to its normal 28 day exfoliating cycle. And contrary to popular belief it's the UVB rays that are responsible for burning and not UVA High Pressure Lamps.

High pressure tanning also tans the 2nd and 3rd sub-layers of the epidermis.

So even if the outer layer exfoliates, the layers beneath are still tanned, giving your clients a Faster, Deeper, Longer Lasting Tan.

You can also generate greater profits and differentiate yourself from your competitors.

With high pressure tanning beds your salon will be known as the only place to go for a quality long lasting tan.... the results speak for themselves, so sit back and watch your customers spread the word!

Start 2004 ahead of your competitors with the very latest in tanning quality and equipment.
